

Diamond CG fusion tensor $C^{\{\lambda_3 \alpha_3\}}_{\{\alpha_1 \alpha_2\}}$ for $r_5 \otimes r_5 = r_1 \oplus r_5 \oplus r_{18}$
 (mode-3 slices: one 2×2 input matrix per output state; $|C|=1/\sqrt{2}$ on every coupling)

Gauge note: the overall phase of each output block is a convention (here $\approx 57^\circ$); the $|C|$ pattern and within-block relative phases (e.g. the $+/-$ in r_{18} = antisymmetric singlet) are physical.
